CSC 4370 — WEB PROGRAMMING

Path of Ascension

Project 1 — Quest Explorer

HTML & CSS Website Showcase

Hien Dao & Trajuan Smith

Project Purpose & Audience

Project Purpose

Create an immersive cultivation-themed adventure experience where visitors can:

- Explore fantasy regions
- Discover available missions
- Follow a journey toward ascension

Target Audience

Designed for:

- Fans of xianxia and cultivation stories
- Fantasy and adventure enthusiasts
- Visitors interested in interactive quest exploration

Our goal: Make exploring a cultivation world intuitive, engaging, and accessible

Quest Explorer & Adventure Pack

Quest Explorer Track

- Four interconnected pages
- Region exploration and mission details
- Consistent navigation and status indicators
- Responsive layouts using CSS Grid and Flexbox

Adventure Pack Extension

- Journey timeline with checkpoint states
- Available, ongoing, completed, and locked styling
- Motion cues to emphasize progression
- Visual feedback for exploration

Together, these features turn a static website into a guided fantasy adventure experience

Website Structure & Navigation

01 Home

Introduces the cultivation journey and guides visitors toward exploration.

02 World

Displays explorable regions, difficulty levels, and available missions.

03 Mission

Provides mission details, objectives, and progression states.

04 Team

Introduces the cultivator, the developers and highlights their contributions.

Consistent navigation connects all four pages into one experience.

HTML Structure & File Organization

Path-of-Ascension/

- index.html
- world.html
- mission.html
- Team.html

- css/
  - styles.css
  - home.css
  - world.css
  - mission.css
  - team.css
- images/

Adventure Pack Extension

- Semantic HTML5 structure
- Shared CSS for consistent styling
- Page-specific CSS files
- Reusable navigation and components
- Organized images and assets

Modular styling keeps the website consistent and easier to maintain.

CSS Layout, Responsiveness & Animations

Grid & Flexbox

- Region card layouts
- Navigation alignment
- Organized page sections

Responsive Design

- CSS media queries
- Two-column to single-column layouts
- Flexible spacing and sizing

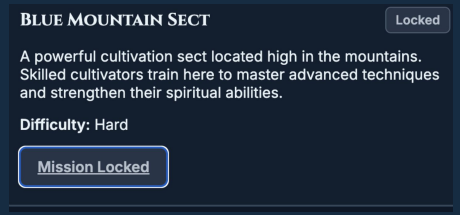

CSS Motion

- Hover transitions
- Cultivation-themed effects
- Visual interaction feedback

Responsive layouts and purposeful motion improve usability across devices

Accessibility, Testing & Debugging

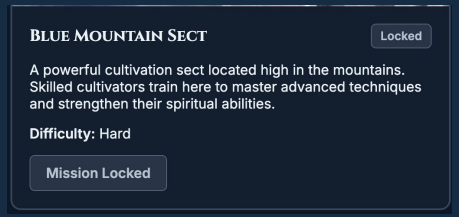

Before — Locked Link Issue

```
<a href="mission.html#inner-trial" class="region-link-disabled">
    Mission Locked
</a>
```

Locked control still appeared in keyboard navigation.

After — Noninteractive Span

```
<span class="region-link-disabled">
    Mission Locked
</span>
```

Locked control is no longer a keyboard Tab stop.

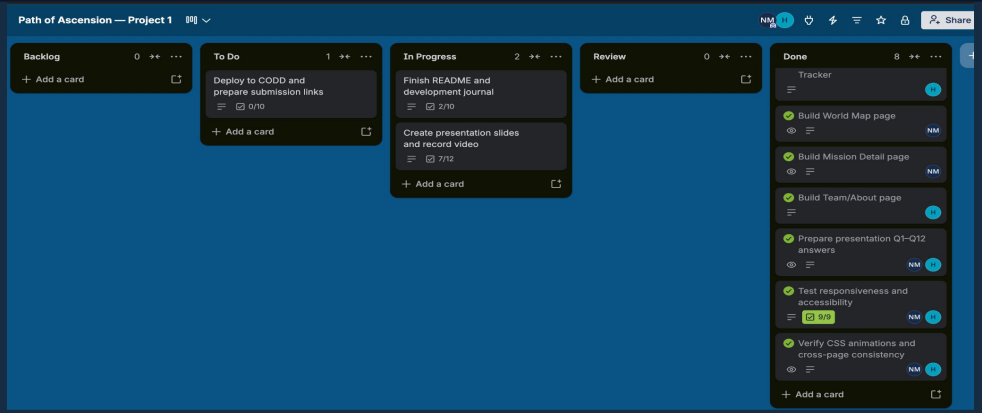

Additional Accessibility & Testing

- Keyboard focus
- Responsive Grid
- Reduced motion

Accessibility improvement: Disabled-looking controls should not behave like active links.

Kanban Board & Team Collaboration

Our Trello Kanban Board

Task Responsibilities

Hien Dao
- Home Page & Team Page

Trajuan Smith
- World Page & Mission Page

Development Workflow

- Track tasks using Trello
- Work on separate Git branches
- Merge completed features
- Review shared navigation and styling

Challenges, Lessons & Future Improvements

Challenges

Keyboard accessibility for locked regions.

Coordinating shared styles across pages.

Building mission interactions without JavaScript.

Lessons Learned

Use semantic HTML for correct behavior

Separate shared CSS from page-specific CSS

Test with keyboard and mobile layouts

Future Improvements

Persistent mission progress

Reusable navigation components

Expanded quests and region unlocking

Path Of Ascension

A responsive, cultivation-themed Quest Explorer built with HTML and CSS
